

Let your pool hibernate this winter

ALONG WITH the pleasure of owning a pool there is the constant need for regular maintenance to keep the water fresh and clean. For most pool owners, the swimming season on the Costa Blanca is only four months; for the remaining eight months the pool is not in use but still needs regular

The elastic straps are placed at 50cm intervals

upkeep. A specially designed winter pool cover, installed correctly, will seal off the pool and significantly reduce maintenance, chemicals and energy costs.

Toldos Alchemy pool covers are made from reinforced polyester vinyl and the seams and hems are heat welded for added strength. Each cover is made to measure for a precise fit and held in place by tight elastic straps that make it difficult for children to remove or lift the cover. The tensioned cover will effortlessly support a child's/pet's weight, providing significant safety benefits.

Once the cover is in place, the pool pump is switched off and no chemicals are needed until the cover is removed in the Spring. The opaque vinyl canvas is blue topside and black underneath which ensures that no light enters the pool and therefore stops microorganism growth. The elastic straps are placed at 50cm intervals and attach to a stainless steel/brass fitting that screws down flat when the cover is not in use. All covers are made with a central membrane which allows rainwater to filter into the pool and exit through the pool overthrow.

The cover is removed at the start of the

swimming season and simply folded away and stored until needed. We also offer a cover fitting/removal service should you require it.

Toldos Alchemy has been installing sun blinds throughout the Costa Blanca since 1992 and for the last two years has been installing winter pool covers to the same high standard.
